Summary

The FCC's freeze is causing severe harm to paging companies, and the "Interim Licensing Proposal" contained in the Notice of Proposed Rule Making will provide little relief. Paging is a mature, highly competitive industry; carriers must regularly improve and expand their services in response to customer demand, or risk losing their competitive position in the market.

Due to the freeze, many paging carriers have been, or soon will be, forced to "put on hold" expansion plans, including equipment orders, site lease arrangements, and hiring plans. The FCC's halting of this existing, growing industry is thus having a "ripple effect" throughout many sectors of the nation's economy. The Interim Licensing Proposal, by allowing operators to expand only on a secondary basis, is of little help. The uncertainty attendant to secondary licensing status will chill both debt and equity investment in paging systems, and the loss of a "secondary" service area to a subsequent "primary" licensee will cost the incumbent a substantial investment and degrade service to the incumbent's subscribers.

Both the freeze and Interim Licensing Proposal are unnecessary; there is so little "white area" left on paging channels that the FCC will not preserve much, if any, spectrum to be allocated and auctioned on a wide-area basis. A more rational approach would be to accept and process paging applications during the pendency of this proceeding under existing rules, slightly modified. Any legitimate mutually exclusive situations that occur can be resolved by competitive bidding, preferably by simple oral outcry or sealed bid auctions. That approach would prevent financial hardship to paging operators, and allow for the more expeditious provision and expansion of paging services to the public.

COMMENTS OF METROCALL, INC. ON INTERIM LICENSING PROPOSAL

Metrocall, Inc. ("Metrocall"), by its attorneys and pursuant to Section 1.415 of the Commission's Rules, 47 C.F.R. § 1.415, hereby submits its Comments in response to the "Interim Licensing Proposal" in the Notice of Proposed Rule Making¹ ("NPRM") in the above-captioned proceeding.

I. Statement of Interest

Metrocall is one of the largest publicly traded paging companies in the nation. Through its licensee-subsiidiary, Metrocall USA, Inc., Metrocall provides radio common carrier ("RCC") paging and private carrier paging ("PCP") services throughout many areas of the United States. Through its corporate predecessors, Metrocall has provided paging services for more than a decade, and it continues to undergo tremendous growth. Metrocall's RCC facilities serve the Northeast, Mid-Atlantic and West Coast, and it is in the process of expanding that network throughout the Southeast, Southwest and other regions of the country through "new" applications

¹ FCC 96-52 (released February 9, 1996).

and through acquisitions. On two 929 MHz PCP frequencies, Metrocall has qualified for nationwide exclusivity, and is in the process of building out its nationwide networks²; Metrocall has also qualified for regional exclusivity on a third 929 MHz frequency. Over its RCC and PCP facilities, Metrocall currently has approximately one million subscribers, and is actively pursuing business plans to increase its customer base nationwide.

The freeze, if kept in place until the Commission releases a Report and Order in this proceeding, will have a severe adverse impact on Metrocall. As a publicly traded company, Metrocall's obligations to its shareholders do not allow it to put expansion plans "on hold" indefinitely; the uncertainty created by the freeze is adversely affecting Metrocall's ability to solidify its 1996 business plan.

Moreover, the freeze has left the status of 929 MHz systems that have qualified for exclusivity highly uncertain. Metrocall's nationwide and regional 929 MHz frequencies are obviously corporate assets of considerable value; to the extent that the freeze may inhibit Metrocall from making necessary modifications to those systems, Metrocall and its public shareholders will be irreparably harmed.

As a paging company whose existing assets and future business plans may be adversely affected by the freeze, Metrocall clearly has standing as a party in interest to file comments in this proceeding. Moreover, as a long-time paging licensee that has grown from a small, closely-held family business to a prominent, publicly-held corporation, Metrocall is well-qualified to

² The Commission has granted Metrocall an additional six months to complete construction of its nationwide PCP networks on a "single count" transmitter basis. See Memorandum Opinion and Order in PR Docket No. 93-35, FCC 96-53, at ¶ 31 (released February 13, 1996) ("PCP Exclusivity Reconsideration").

comment on the freeze and the "Interim Licensing Proposal."

II. Summary of the Interim Licensing Proposal.

Concurrently with the adoption of the NPRM, the Commission announced that it was "suspending acceptance of new applications for paging channels." See NPRM at ¶ 139. The subsequent paragraphs of the NPRM clarify that applications for modifications that extend a licensee's existing interference contours, pending mutually exclusive applications, and RCC applications for which the mutually-exclusive "cut-off" period had not ended as of February 8, 1996, were also "frozen." The "freeze" provisions of the NPRM permit licensees to make modifications that do not extend the licensee's current interference contours without Commission approval. See Id. at ¶ 140. The NPRM further states that non-mutually exclusive RCC paging applications for which the "cut-off" date had passed by February 8, 1996, non-mutually exclusive applications for the exclusive 929 MHz PCP frequencies filed with the FCC by February 8, 1996, and applications for shared frequencies received by PCIA by February 8, 1996, will be processed in accordance with existing procedures. Id. at ¶¶ 145-147.

Although the NPRM states that PCP licensees who "have obtained nationwide exclusivity" may apply for "additional sites without restriction[.]" see NPRM at ¶ 142; the NPRM does not define what it means for a licensee to have "obtained" nationwide exclusivity. The NPRM later notes that the Commission has "numerous requests for conditional and permanent exclusivity" pending before it, which will not be processed during this proceeding. Id. at ¶ 148. Moreover, the Commission states its belief that in the event geographic licensing is adopted, all existing PCP facilities will receive protection as incumbents, and those "pending" exclusivity requests will be "moot." Id.

In imposing its freeze, the Commission requested comment, on an expedited basis, whether during the pendency of this proceeding, incumbents should be permitted to file modifications that would extend their service areas beyond current interference contours, with such modified authorizations being issued on a secondary basis. Id. at ¶ 143.

III. The Commission's Proposed Treatment of PCP Exclusivity Requests Requires Clarification.

Since the Commission first adopted its PCP exclusivity rules in 1993, hundreds of licensees have submitted applications for 929 MHz systems meeting the requirements for local, regional or nationwide exclusivity; those applications have been coordinated by PCIA, licenses have been issued by the Commission, and licensees have timely constructed (or are constructing under extended implementation schedules) the facilities necessary to qualify for exclusivity.

In some cases, "grandfathered" licensees such as Metrocall, requested waivers of the Commission's rules to obtain additional time within which to build out wide-area systems in accordance with the exclusivity rules (in Metrocall's case, nationwide systems), and began build-out of their systems pending action on those waiver requests. Metrocall's waivers have been granted, and it is taking all necessary steps to timely complete its system build-out in the time permitted by the Commission. Metrocall has also been licensed for, and constructed, a system on a third 929 MHz channel that qualifies for regional exclusivity on a non-grandfathered basis.

With the exception of a single Public Notice released in May of 1994, listing "grandfathered" incumbents that qualified for local, regional or nationwide exclusivity, see Public Notice, DA 94-546 (released May 27, 1994); the Commission has not, to the best of Metrocall's knowledge, formally decided any other exclusivity request filed with it. Incumbents

who had not yet completed construction of their systems were granted "conditional exclusivity," and were given until January 27, 1995 to demonstrate their compliance with the exclusivity rules. Id.

In short, since the Commission's initial acceptance of incumbents' exclusivity requests in January of 1994, licensees have been submitting applications, receiving license grants, and constructing and operating stations in full compliance with the exclusivity criteria of Section 90.495 of the Commission's Rules. PCIA (and its predecessor, NABER) have approved these licensees for exclusivity at the time of coordinating their applications.

Despite these licensees' compliance with the rules, and their receipt of approval from the designated frequency coordinator for PCP applications, the Commission has not provided these licensees with any indication that it has "approved" or "granted" their exclusivity requests. Paragraph 148 of the NPRM appears to indicate that the Commission considers all of those exclusivity requests as "pending," that none of those requests will be processed, and that the Commission plans to dismiss them as "moot." See NPRM at ¶ 148. Metrocall strongly objects to such an approach, and requests that the Commission clarify its intentions with regard to applicants who have met the requirements for non-nationwide exclusivity, but who have not been issued some form of formal "exclusivity grant" by the Commission.

Because two of Metrocall's 929 MHz PCP systems are qualified for nationwide exclusivity on a grandfathered basis, the freeze does not affect those systems. See NPRM at ¶ 142. However, Metrocall has also invested substantial resources in its regional system. Metrocall has completed construction of that system in full compliance with Section 90.495(a)(2) of the rules, but has not received any indication that the FCC has "granted" it

"permanent" exclusivity. Because the NPRM is ambiguous regarding whether such a fully-constructed regional system would be deemed "pending" for purposes of Paragraph 148, Metrocall is concerned about the NPRM's impact on its regional system.

To the extent that a fully constructed, qualified exclusive system is being considered "pending" and its exclusive status subject to dismissal, Metrocall submits that the exclusivity requests licensees have been filing for two years will not necessarily be rendered "moot" under the Commission's geographic licensing proposal, simply because the requesting licensees will be protected as "incumbents." The geographic areas for which those licensees have earned exclusivity will not necessarily be interchangeable with the protection the Commission proposes in the NPRM. The NPRM contains proposals to determine the interference protection rights of incumbents, *see, e.g., NPRM* at ¶ 52; under those proposals, incumbent licensees may well find the area in which they are entitled to interference protection smaller than under the current rules. The loss of the exclusivity rights which those incumbents have earned may therefore impair the competitiveness of their systems.

It is beyond dispute that a license to use the radio spectrum "requiring - as it does - substantial investment is more than a mere privilege or gratuity. [It] is a thing of value to the person to whom it is issued and a business conducted under it may be the subject of injury." *See L.B. Wilson, Inc. v. FCC*, 170 F.2d 793, 798 (D.C.Cir. 1948). The Act explicitly provides licensees with the right to a hearing before their licenses may be revoked or modified. *See* 47 U.S.C. §§ 312; 316. The NPRM's proposal, to the extent that it deprives licensees of the exclusive status they have already qualified for under the rules, or even to the extent that it will reduce the size of the service area that these incumbents were entitled to prior to the freeze, does

not comport with the Act's hearing requirements or basic principles of administrative due process.

PCP licensees have, for over two years, obtained licenses and built out their systems in good faith compliance with the Commission's validly-adopted rules. The proposal in the NPRM, unless it is interpreted to exclude licensees who have constructed their exclusive systems, or licensees who are building out under a granted waiver and/or under the outstanding construction periods on their licenses, from the definition of "pending" exclusivity requests, would unlawfully deprive these licensees of the exclusivity they have earned under the rules, and unlawfully modify their licensed stations without the necessary prior notice and opportunity for hearing, in some cases to the point of depriving them of their investment in their systems. To so deprive these licensees of the exclusivity and coverage rights they have earned, and in which they have invested millions of dollars, is arbitrary, capricious, and a violation of the Act and of administrative due process.

IV. The Freeze will Irreparably Harm Paging Licensees, and Disserve the Public Interest.

Paging is a mature, highly competitive industry, and the FCC has so found. See, e.g., NPRM at ¶¶ 6-7. On average, there are five competing paging companies in each market, and in some markets as many as nineteen. See Second Report and Order in GN Docket No. 93-252, FCC 94-31 at ¶ 140 (released March 7, 1994) ("Second CMRS Order"). This industry serves over 27 million customers nationwide, with increasingly high technical quality and at affordable rates. See NPRM at ¶ 7.

In this competitive industry, expansion plans simply cannot be put on hold for months at a time. Even companies of substantial size frequently must expand and modify their systems,

both for technical reasons and in response to market demands. The harm that the freeze will cause if allowed to continue cannot be overstated; and, its effects will be felt beyond the companies that hold paging licenses. Paging companies currently employ tens of thousands of people nationwide, and contract for the services of thousands of technicians, salespeople and other persons in support functions. Metrocall alone employs approximately 850 people in approximately thirteen states. The paging industry spends tens of millions of dollars each year in equipment costs, site lease rents, office and retail space lease rents, advertising, and other costs associated with conducting an existing, growing business. Paging company employees, independent contractors, and the other industries which support and supply the paging industry, will be financially harmed if the paging industry is "stopped in its tracks" for several months by an application freeze.

Members of the public who subscribe to paging services will also be harmed. The paging industry has become such a "success story" due in large part to paging operators' responsiveness to subscriber demands, assisted by a regulatory regime that did not unreasonably impede operators' ability to expand their systems in the directions dictated by the market. Customers nationwide have come to rely on the prompt responsiveness of paging licensees; the paging industry provides vital communications services for many of the nation's businesses. The freeze thus impacts not only the paging industry, but also the businesses that rely on paging services; the inability of paging companies to expand to meet their customers' changing needs will negatively affect those customers' abilities to efficiently conduct their own businesses.

Moreover, among Metrocall's customers are hospitals, law enforcement agencies, and other entities in both the government and private sectors whose business concerns the "public

health, safety and welfare." For those customers, access to rapid, reliable signaling services can quite literally mean "the difference between life and death."

In short, the freeze, if allowed to continue, will cause devastating harm to the paging industry, which will have a "ripple effect" extending to subscribers, equipment suppliers, technical support personnel, and many others who conduct business with this industry.

**V. The Interim Licensing Proposal does not
Adequately Address the Needs of
Paging Licensees and their Subscribers.**

The Interim Licensing Proposal, under which incumbent paging operators could make modifications that expand their current interference contours, but only on a secondary basis, partially allays only some of the harm the freeze is causing to paging companies and their customers. However, that proposal falls far short of providing paging companies with a realistic means of carrying out their business plans and meeting customer demand during the pendency of this proceeding.

The uncertainty the Interim Licensing Proposal will cause as to whether licensees will be able to carry out their expansion plans for the long term is likely to chill investment in the paging industry. And, the Interim Licensing Proposal will make it more difficult for paging companies to obtain loans and credit: a commercial lender is unlikely to advance funds to construct a system which may well be required to cease operations within a year or two. Even large companies such as Metrocall enter into credit agreements to finance their expansion plans, and those agreements are invariably secured with the transmitter equipment and FCC license rights of the borrower. No lender will accept "secondary" security for the type of money necessary to build out a paging network. Under the FCC's freeze and Interim Licensing Proposal, even mid-

sized to large companies are likely to experience difficulties in obtaining capital.

Moreover, if a subsequent, "primary" licensee's transmitter does not serve all of the area previously served by the incumbent's "secondary" transmitter, the subscribers served by the incumbent will suffer from a degradation, if not complete loss, of service. As previously stated, many paging subscribers are members of the medical and law enforcement communities. Those subscribers, and the members of the public whose health and safety depends on them, cannot risk such disruptions in service. The Interim Licensing Proposal places paging subscribers in an untenable position: they can either forego needed paging services, or they can obtain those services now but lose them in the future.

Although Metrocall appreciates the Commission's desire to provide paging licensees with flexibility to modify their systems during the pendency of this proceeding, Metrocall respectfully submits that the Interim Licensing Proposal does not adequately meet that goal. Since there is so little "white area" left on the frequencies allocated to paging services, neither a "hard freeze" nor the Interim Licensing Proposal will provide sufficient public benefit to outweigh the harm that they will cause to the paging industry.

VI. There is a Less Drastic Alternative to the Freeze and the Interim Licensing Proposal.

As detailed in the preceding sections, the freeze is adversely affecting paging companies, their vendors and suppliers, and their subscribers. The Interim Licensing Proposal, while less harmful than a "hard freeze," will still create uncertainties that will increase costs on licensees and chill investment in the paging industry. In the mature and highly competitive paging industry, neither of these procedures will serve the Commission's intended purpose of preserving spectrum for wide-area licensing and competitive bidding. If the Commission truly wishes to

recapture the value of the little remaining paging spectrum for the public, without crippling the growth, flexibility and responsiveness to public demand that have characterized the paging industry, there is a far less drastic means by which to accomplish those laudable ends.

As the Commission itself has noted, there is very little "white area" left on the frequencies allocated to paging services. See NPRM at ¶ 65. Moreover, for the "white area" that remains, there are few places that any party other than the incumbent paging operator on a particular frequency, could locate a transmitter on that frequency consistent with the Commission's interference standards. See NPRM at ¶ 66. Consequently, the freeze and the Interim Licensing Proposal will not "preserve" much, if any, spectrum that could be used by new entrants into the paging industry; in most parts of the country, there simply isn't vacant spectrum to preserve.

Since any MTA (or other wide-area) licenses that the Commission chooses to allocate are likely to be of value only to incumbents seeking to solidify their position in a particular geographic area, there is nothing to be gained by prohibiting incumbent licensees from filing for necessary modifications now. The freeze and Interim Licensing Proposal are merely preventing paging operators from building out their systems, responding to new and changing customer demands, and maintaining a high quality of service, without any countervailing public interest benefits. That situation could be remedied quite simply, by continuing to accept paging applications under existing procedures, slightly modified, and conducting auctions in those situations where genuine mutually exclusive applications are filed.

Under this approach, "new" or "initial"³ Part 22 paging applications would continue to be reviewed by the staff and then placed on Public Notice as accepted for filing, triggering the thirty-day period within which interested parties may file petitions to deny and competing applications. If no timely-filed protests or mutually exclusive applications are filed, the application would be granted. Mutually exclusive applications would be subject to competitive bidding.

For exclusive 929 MHz PCP applications, a similar process could be instituted.⁴ Upon receipt of coordinated "new" or "initial" applications for exclusive PCP facilities, the Commission's staff could place those applications on a weekly Public Notice. Mutually exclusive applications would be required to be filed within 30 days of Public Notice; any mutually exclusive situations would be resolved by periodic auctions. Although this approach would involve modifying the current one-day cut-off for 929 MHz exclusivity requests, there would be no impediment to doing so. It is well-settled that "cut-off" rules are procedural in

³ Because the definition of an "initial" application is so broad, both under Part 22 and under the general CMRS rules in Part 20, most paging modification applications fall within that definition, and would thus be subject to competitive bidding in the event of mutual exclusivity. Thus, under the current rules, there would conceivably be more geographic area available for auctions than under the NPRM's proposal.

⁴ For the shared 929 MHz channels, as well as the shared VHF and UHF paging frequencies under Part 90, no mutual exclusivity can occur; *i.e.*, the grant of one application cannot, under the Rules, preclude the grant of another. Applications for the shared channels should continue to be accepted and processed under existing procedures during the course of this proceeding; if the Commission determines to grant some form of exclusivity for those channels in the course of this proceeding, it can do so without freezing the shared channels now. For example, the right to exclusivity within the licensing area at issue could constitute the "authorization" to be auctioned. The shared PCP channels, particularly in the lower bands, are already heavily congested. Any "exclusive" licensee on those channels will need to grapple with the need to protect multiple incumbents in most areas; freezing those channels during the pendency of this proceeding is not likely to materially ease that burden.

nature, and may be adopted or modified without regard to the notice and comment provisions of the APA. See Ranger v. FCC, 294 F.2d 240, 244 (D.C.Cir. 1961).⁵

If the Commission is concerned about speculative filings during this interim period, Metrocall respectfully submits that there are sufficient mechanisms under the FCC's existing Rules to deter speculators. Part 22 paging applications are subject to petitions to deny under Section 309 of the Act. See 47 U.S.C. § 309(d). Although it is questionable whether petitions to deny would lie against PCP applications before the Budget Act's statutory transition period ends on August 10, 1996, the Commission has ample authority to treat any protests filed against PCP applicants prior to that date as "informal objections." See 47 C.F.R. § 1.41. Legitimate paging operators such as Metrocall will gladly assist the Commission as "private attorneys general" when speculative applications threaten to interfere with their provision of service to their subscribers.

Under this proposal, the Commission could hold auctions to resolve mutually exclusive situations in much the same manner as it periodically held lotteries. Since applications are currently filed for a single transmitter, the contours of which cover a limited geographic area, the number of mutually exclusive applications is likely to be small. The auction procedures applied to these "interim applications" could therefore be kept simple; for example, oral outcry auctions could be held, perhaps telephonically. Rather than taking weeks - or months - as simultaneous multiple round auctions have, these oral auctions, each to resolve a single mutually exclusive situation, would be unlikely to last more than a few hours.

⁵ Moreover, the industry has certainly received notice that the Commission would be considering adopting consistent licensing rules for Part 22 and Part 90 paging services, including auction rules, for some time now. See, e.g., Third CMRS Order at ¶¶ 346-347.

The Commission has authority to adopt specific competitive bidding procedures for various services. See 47 U.S.C. § 309(j)(3). Metrocall urges the Commission to adopt, in this Interim Comment Period, simple auction rules to govern cases of mutual exclusivity among the applications now pending, and all paging applications filed prior to the release of a Report and Order in the main rule making proceeding.

Nothing in the Budget Act amendments to the Communications Act compels the Commission to use competitive bidding for only Commission designed service areas. See 47 U.S.C. § 309(j). To the contrary, the Commission has previously stated its approval of the general use of public notices and cut-offs, with auctions to resolve mutual exclusivity as it occurs, for CMRS services. See Third CMRS Report and Order at ¶ 328. Metrocall respectfully submits that, regardless of whether the Commission eventually adopts wide-area licensing for paging services, this approach during the pendency of the rule making process would further the Congressional objectives embodied in the Budget Act, and would serve the public interest.

VII. The Freeze may be Unlawful.

Freezing paging applications for the sake of instituting wide-area auctions contravenes the letter and the spirit of the Budget Act amendments to the Communications Act. It is instructive to review the statutory objectives that Congress instructed the Commission to consider in determining whether to award licenses by competitive bidding:

a) "[D]evelopment and rapid deployment of new technologies, products and services ... without administrative or judicial delays..." See 47 U.S.C. § 309(j)(3)(A). Paging is not a new service, but a mature industry. Freezing paging applications to preserve white space for

auction will not bring anything "new" to the public, and will cause delays and degradation to the services the public is already receiving. A paging freeze is simply an "administrative ...delay" in licensing, which the Budget Act specifically instructs the FCC to avoid.

b) "[P]romoting economic opportunity and competition... avoiding excessive concentration of licenses and ... disseminating licenses among a wide variety of applicants" - including "Designated Entities." See 47 U.S.C. § 309(j)(3)(B). Paging is already a highly competitive industry, and the FCC itself has so noted. Licenses are already "disseminated ... among a wide variety of applicants;" there are numerous competing paging operators in nearly all markets, and those operators range from large publicly traded corporations to small entrepreneurs.

It is difficult to see how freezing paging applications will improve competition in the paging industry; to the contrary, the freeze has arbitrarily erected entry barriers to new entrants in the paging market, contrary to the Budget Act's statutory intent. Moreover, the freeze is inhibiting incumbent licensees' abilities to compete in the market, which may in turn inhibit their ability to compete in the upcoming auctions. The longer the freeze continues, the more it will harm existing paging companies, while blocking the entry of new, competitive service offerings in the paging market. In short, the freeze will have the presumably unintended result of decreasing competition in the paging industry.

c) Recovering a portion of the value of the spectrum for the public. See 47 U.S.C. § 309(j)(3)(C). In opposing this freeze, Metrocall is not seeking "free" spectrum from the FCC. Metrocall is certainly willing to compete for the authorizations it needs at auction, if its applications are mutually exclusive with others. Recapturing the value of the paging spectrum

will not be impeded by the Commission's continued acceptance of paging applications during this proceeding; mutually exclusive applications filed during this proceeding can be subject to competitive bidding regardless of the Commission's final determination of the other issues raised in the NPRM.

d) "[E]fficient and extensive use of the electromagnetic spectrum." See 47 U.S.C. § 309(j)(3)(D). The existing paging industry is unquestionably a model industry under this criterion. Paging licensees utilize very little spectrum, compared to virtually all other services, and they have traditionally expanded to new areas or requested new frequencies only when there was some legitimate business reason to do so. Rather than requesting the assignment of additional spectrum, paging carriers, on their own initiative and at their own cost, have implemented increasingly advanced, spectrally-efficient technologies. Paging companies have aggressively deployed technological advances to increase baud rates, and consequently, spectral efficiency. The freeze effectively halts paging carriers' efforts to upgrade their systems to newer, even more spectrally efficient technologies, by preventing any modifications that would extend a licensee's authorized theoretical interference contours.

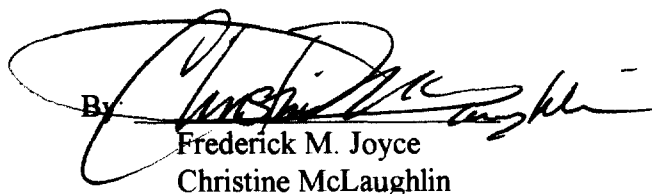

It is thus hardly "efficient," or fair, to now prevent paging licensees from continuing to expand and improve their services in response to consumer demand. Simply put, the policy goals embodied in Section 309(j) of the Act can be better achieved by continuing to accept and process paging applications during the pendency of this rule making proceeding.

CONCLUSION

For the foregoing reasons, Metrocall respectfully requests that the Commission lift its freeze on paging applications, and resume the acceptance and processing of all paging applications under the alternate proposal detailed herein.

Respectfully submitted,

METROCALL, INC.
